Applications

Protection of motors

Magnetic circuit-breakers provide short-circuit protection. They must be combined with thermal overload relays to provide motor overload protection.

Thermal-magnetic motor circuit-breakers
GV2, GV3 and GV7

GV2 ME
with screw clamp
terminals

GV2 ME
with spring terminals
connections

Presentation

GV2 ME, GV2 P, GV3 ME, GV3 P and GV7 R motor circuit-breakers are 3-pole thermal-magnetic circuit-breakers **specifically designed for the control and protection of motors**, conforming to standards IEC 60947-2 and IEC 60947-4-1.

Connection

GV2

GV2 ME and GV2 P circuit-breakers are designed for connection by screw clamp terminals.

Circuit-breaker GV2 ME can be supplied with lugs or spring terminal connections. Spring terminal connections ensure secure, permanent and durable clamping that is resistant to harsh environments, vibration and impact and are even more effective when conductors without cable ends are used. Each connection can take two independent conductors.

GV3

GV3 circuit-breakers feature connection by BTR screws (hexagon socket head), tightened using a n° 4 Allen key.

This type of connection uses the **EverLink®** system with creep compensation (1) (Schneider Electric patent).

This technique makes it possible to achieve accurate and durable tightening torque, in order to avoid cable creep.

GV3 circuit-breakers are also available with connection by lugs. This type of connection meets the requirements of certain Asian markets and is suitable for applications subject to strong vibration, such as railway transport.

GV7

GV7 circuit-breakers: with connection by screw clamp terminals (for bars and lugs) and by clip-on connectors.

Operation

Control is manual and local when the motor circuit-breaker is used on its own.
Control is automatic and remote when it is associated with a contactor.

GV2 ME and GV3 ME80

Pushbutton control.

Energisation is controlled manually by operating the Start button "I" 1.

De-energisation is controlled manually by operating the Stop button "O" 2, or automatically by the thermal-magnetic protection elements or by a voltage trip attachment.

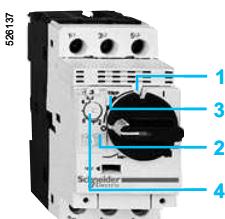

GV2 P, GV3 P and GV7 R

- Control by rotary knob: for GV2 P and GV3 P
- Control by rocker lever: for GV7 R.

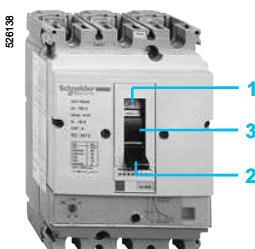

Energisation is controlled manually by moving the knob or rocker lever to position "I" 1. De-energisation is controlled manually by moving the knob or rocker lever to position "O" 2. De-energisation due to a fault automatically places the knob or rocker lever in the "Trip" position 3.

Re-energisation is possible only after having returned the knob or rocker lever to position "O".

(1) Creep: normal crushing phenomenon of copper conductors, that is accentuated over time.

GV2 P

GV7 R

Presentation (continued)**Protection of motors and personnel**

Motor protection is provided by the thermal-magnetic protection elements incorporated in the motor circuit-breaker.

The **magnetic** elements (short-circuit protection) have a non-adjustable tripping threshold, which is equal to 13 times the maximum setting current of the thermal trips.

The **thermal** elements (overload protection) include automatic compensation for ambient temperature variations.

The rated operational current of the motor is displayed by means of a graduated knob 4. Personnel protection is also provided. All live parts are protected against direct finger contact from the front panel.

The addition of an undervoltage trip allows the circuit-breaker to be de-energised in the event of an undervoltage condition. The user is therefore protected against sudden starting of the machine when normal voltage is restored, since the Start button "I" has to be pressed to restart the motor.

With the addition of a shunt trip, de-energisation of the unit can be remotely controlled.

The operators on both open-mounted and enclosed motor circuit-breakers can be locked in the Stop position "O" by up to 4 padlocks.

Because they are suitable for isolation, these circuit-breakers, in the open position, provide an adequate isolation distance and indicate the actual position of the moving contacts by the position of the operators.

3

Special features

These motor circuit-breakers are easily installed in any configuration thanks to their universal fixing arrangement: screw fixing or clip-on mounting on symmetrical, asymmetrical or combination rails.

(1) When mounting on a vertical rail, fit a stop to prevent any slippage.

(2) For motor circuit-breakers GV3 P: BTR hexagon socket head screws, EverLink® system.

Require use of an insulated Allen key, in compliance with local electrical wiring regulations.

(3) For cross-sections 1 to 1.5 mm², the use of an LA9 D99 cable end reducer is recommended.

(1) Leave a space of 9 mm between 2 circuit-breakers: either an empty space or side-mounting add-on contact blocks. Side by side mounting is possible up to 40 °C.

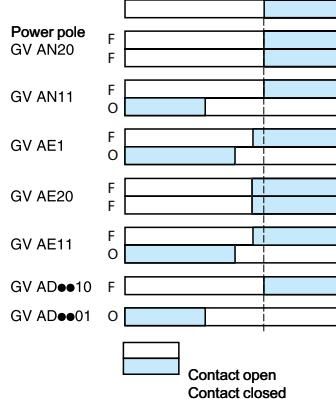

(2) When mounting on a vertical rail, fit a stop to prevent any slippage.

Motor circuit-breakers from 0.06 to 15 kW / 400 V, with lugs

To order thermal magnetic circuit-breakers with connection by lugs, add the digit **6** to the end of reference selected above.

Example: **GV2 ME08** becomes **GV2 ME086**.

Thermal magnetic circuit-breakers GV2 ME with built-in auxiliary contact block

With instantaneous auxiliary contact block (composition, see page 3/55):

- GV AE1, add suffix **AE1TQ** to the motor circuit-breaker reference selected above.

Example: **GV2 ME01AE1TQ**.

- GV AE11, add suffix **AE11TQ** to the motor circuit-breaker reference selected above.

Example: **GV2 ME01AE11TQ**.

- GV AN11, add suffix **AN11TQ** to the motor circuit-breaker reference selected above.

Example: **GV2 ME01AN11TQ**.

These circuit-breakers with built-in contact block are sold in lots of 20 units in a single pack.

(1) As % of Icu.

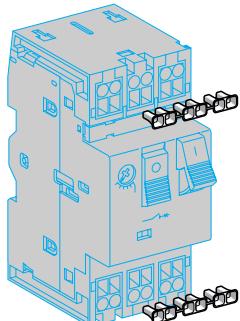

(2) The thermal trip setting must be within the range marked on the graduated knob.

(3) Maximum rating which can be mounted in enclosures **GV2 MC** or **MP**, please consult your Regional Sales Office.

Connection by EverLink® BTR screw connectors, for assembly with a contactor

To assemble a GV3 P13 to P65 circuit-breaker with an LC1 D40A to D65A contactor, it is possible to use the circuit-breaker supplied without downstream EverLink® power terminal block. To order this product, add the digit **1** to the end of the references selected above. Example: **GV3 P65** becomes **GV3 P651**.

Connection by lugs

To order thermal magnetic circuit-breakers with connection by lugs, add the digit **6** to the end of reference selected above. Example: **GV3 P18** becomes **GV3 P186**.

GV3 ME80: pushbutton control, screw clamp terminals

Motor circuit-breakers up to 50 hp / 600 V, UL 508 type E**GV2 (5)**

To obtain a GV2 P motor circuit-breaker, UL 508 type E, combine:

- a circuit-breaker **GV2 P•H7** (except 32 A),
- and a "Large Spacing" adapter **GV2 GH7**.

GV3 (6)

To obtain a motor-circuit-breaker GV3 P, UL 508 type E, use the following with the circuit-breaker:

- a "Large Spacing" cover **GV3 G66**,
- a short-circuit signalling contact **GV AM11**.

GV3 with connection by lugs (6)

To obtain a motor-circuit-breaker GV3 P, UL 508 type E, with connection by lugs, add the digit **6** to the end of reference selected above and use the following with the circuit-breaker:

- two IP 20 covers **LAD 96570**,
- a short-circuit signalling contact **GV AM11**.

(1) As % of Icu.

(2) The thermal trip setting must be within the range marked on the graduated knob.

(3) BTR screws: hexagon socket head. Require use of an insulated Allen key, in compliance with local wiring regulations.

(4) Recommended for use in association with a contactor.

(5) Accessory: see page 3/63.

(6) Accessories: see page 3/57.

Add-on contact blocks				
Description	Mounting	Maximum number	Reference	Weight kg
Visible isolation block (5)	Front (1)	1	GV2 AK00	0.150
Limiters	At top (GV2 ME and GV2 P)	1	GV1 L3	0.130
	Independent	1	LA9 LB920	0.320

(1) Mounting of a GV2E contact block or a GV2 AK00 visible isolation block on GV2 P and GV2 L.

(2) Choice of N/C or N/O contact operation, depending on which way round the reversible block is mounted.

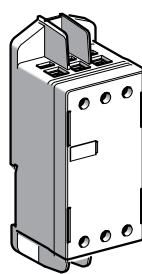

(3) The GV AD is always mounted next to the circuit-breaker.

(4) To order an undervoltage trip: replace the dot (•) in the reference with a U, example: GV AU025.

To order a shunt trip: replace the dot (•) in the reference with an S, example: GV AS025.

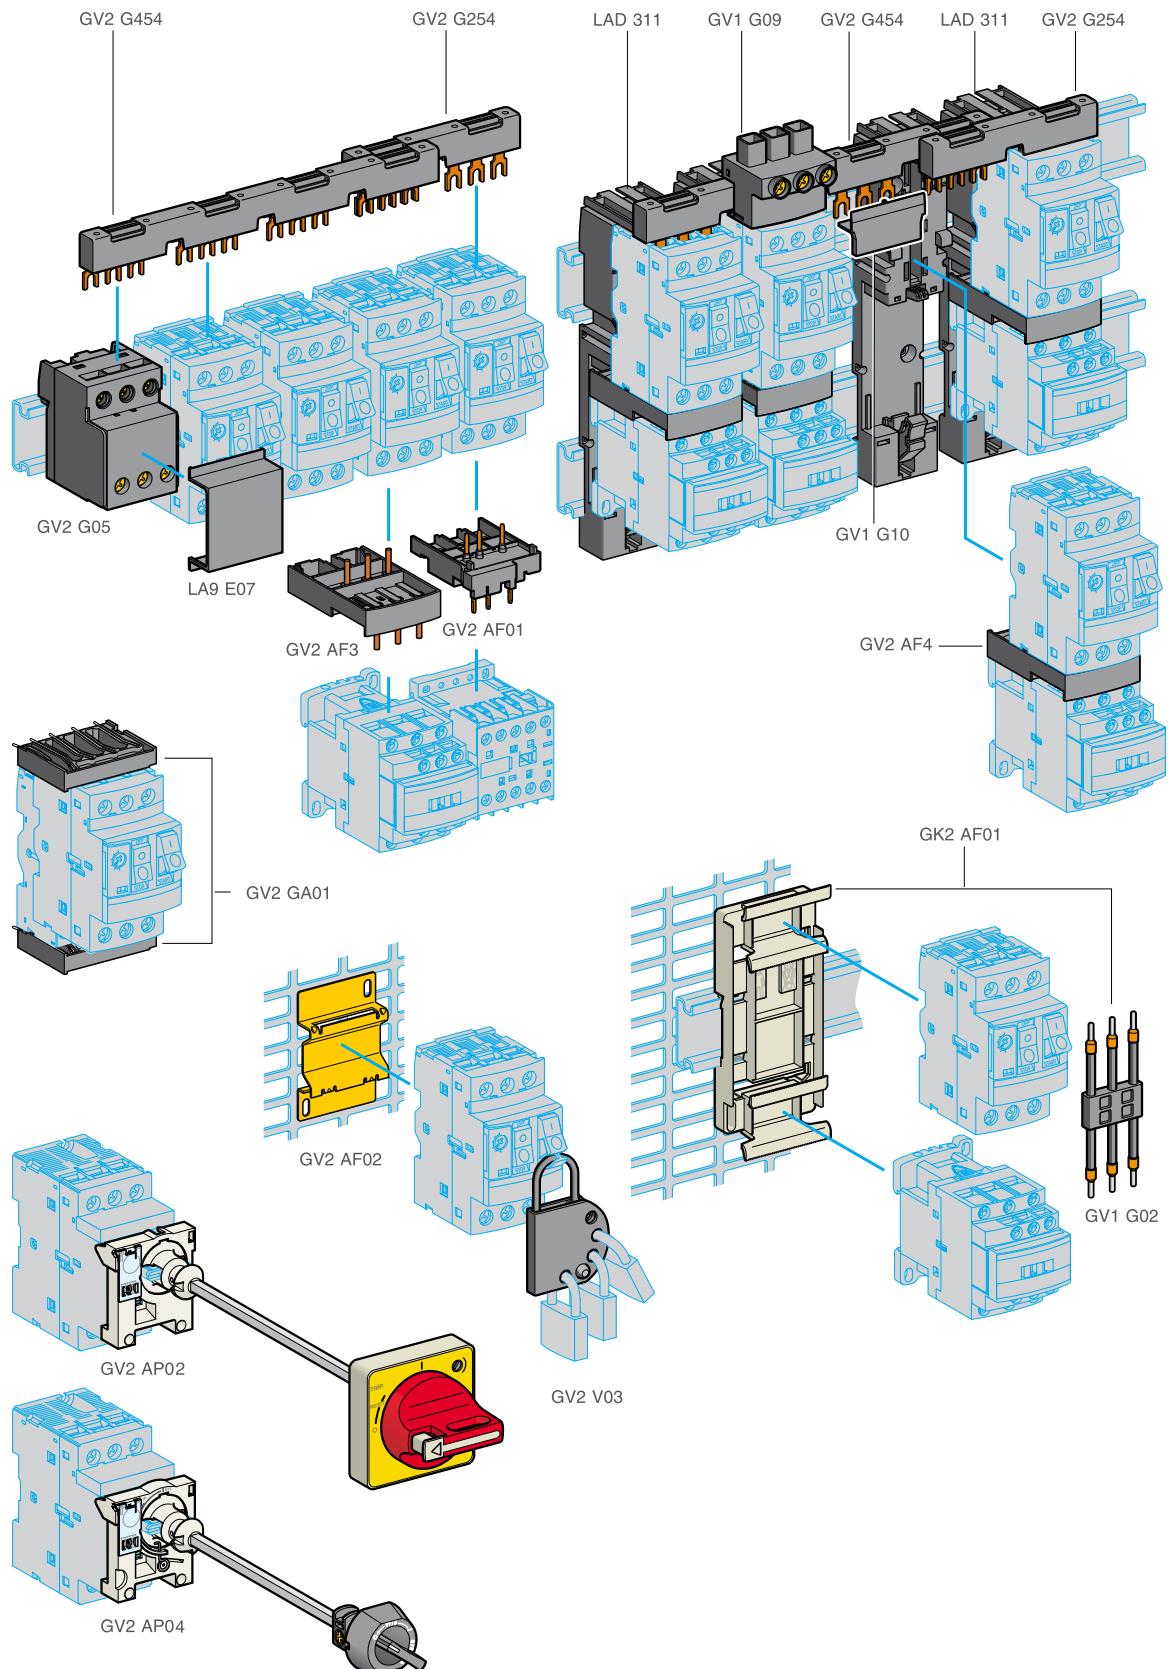

(5) Visible isolation of the 3 poles upstream of circuit-breaker GV2 P and GV2 L.

Visible isolation block GV2 AK00 cannot be used with motor circuit-breakers GV2 P32 and GV2 L32 (ith max = 25 A).

Accessory

Description	Sold in lots of	Unit reference	Weight kg
Padlocking device, for locking the Start button (on open-mounted product)	5	GV1 V02	0,010

For magnetic circuit-breaker GK3 EF80**Contact blocks**

Description	Number of poles	Reference	Weight kg
Auxiliary contact blocks for On-Off signalling and "control circuit test" function (1 or 2 blocks per device) mounted on RH side of GK3 EF80	N/O	GK2 AX10	0,025
	N/O + N/O	GK2 AX20	0,031
	N/C + N/O	GK2 AX50	0,031
Instantaneous fault signalling contact blocks (1 or 2 blocks per device) mounted on LH side of GK3 EF80	N/O	GK2 AX12	0,025
	N/O + N/O	GK2 AX22	0,031
	N/C + N/O	GK2 AX52	0,031

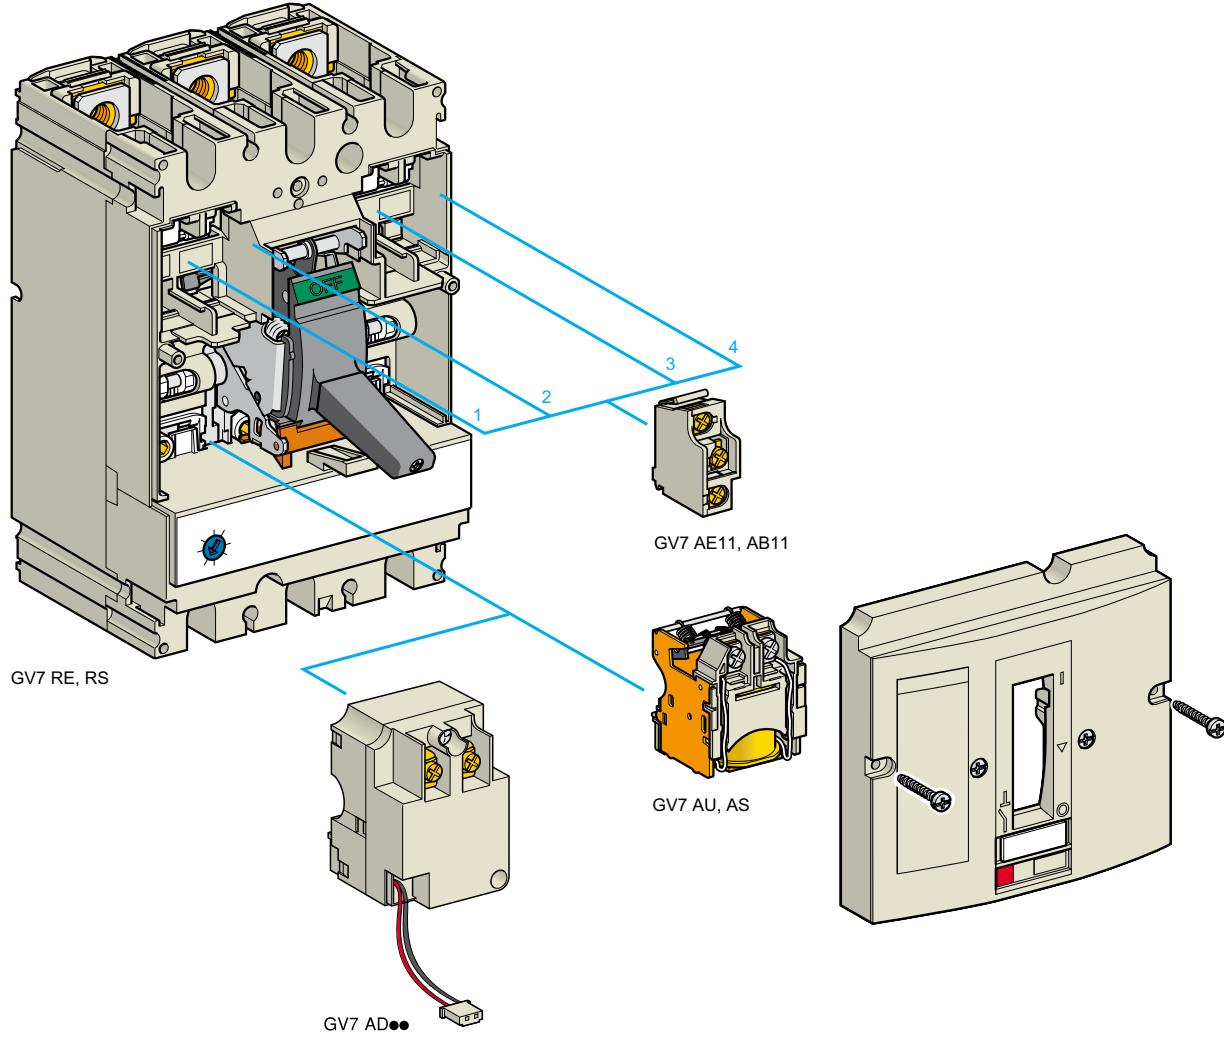

Accessories

Description	Reference	Weight kg
Padlocking device for padlocking the operator, using up to 3 padlocks (padlocks to be ordered separately)	GK3 AV01	0,020
External operator for mounting on enclosure door. Red Ø 40 knob on yellow plate, padlockable in position O (with up to 3 padlocks). Door locked when knob in position I, and when knob padlocked in position O.	GK3 AP03	0,300

(1) 1 voltage trip OR 1 fault signalling contact to be fitted inside the motor circuit-breaker.

Other versions24 to 690 V, 50 or 60 Hz voltage trips for circuit-breakers **GV3 ME80**.
Please consult your Regional Sales Office.

3

Add-on auxiliary contacts

These allow remote indication of the circuit-breaker contact states. They can be used for signalling, electrical locking, relaying, etc. They are available in two versions: standard and low level. They include a terminal block and the auxiliary circuits leave the circuit-breaker through a hole provided for this purpose.

They perform the following functions, depending on where they are located in the circuit-breaker:

Location	Function	Application
1 and/or 4	C/O contact	Indicates the position of the circuit-breaker poles
2	Trip indication	Indicates that the circuit-breaker has tripped due to an overload, a short-circuit, a differential fault or the operation of a voltage trip (undervoltage or shunt trip), or of the "push to trip" test button. It resets when the circuit-breaker is reset.
3	Electrical fault indication	Indicates that the circuit-breaker has tripped due to an overload, a short-circuit or a differential fault. It resets when the circuit-breaker is reset.

Type	Reference	Weight kg
Standard	GV7 AE11	0.015
Low level	GV7 AB11	0.015

3

Fault discrimination devices

These make it possible to:

- either differentiate a thermal fault from a magnetic fault,
- or open the contactor only in the event of a thermal fault.

Voltage	Reference	Weight kg
~ 24...48 and == 24...72 V	GV7 AD111 (1)	0.100
≈ 110...240 V	GV7 AD112 (1)	0.100

Electric trips

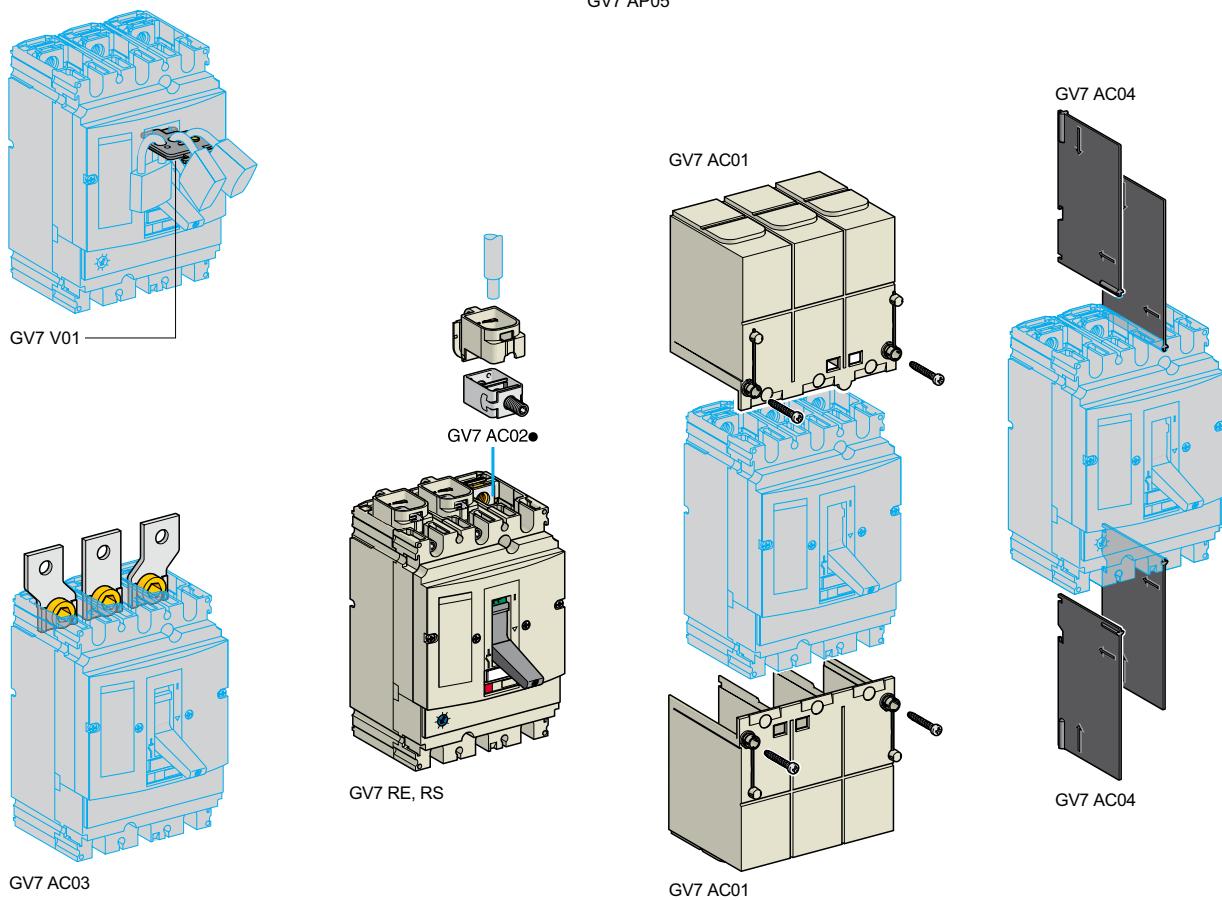

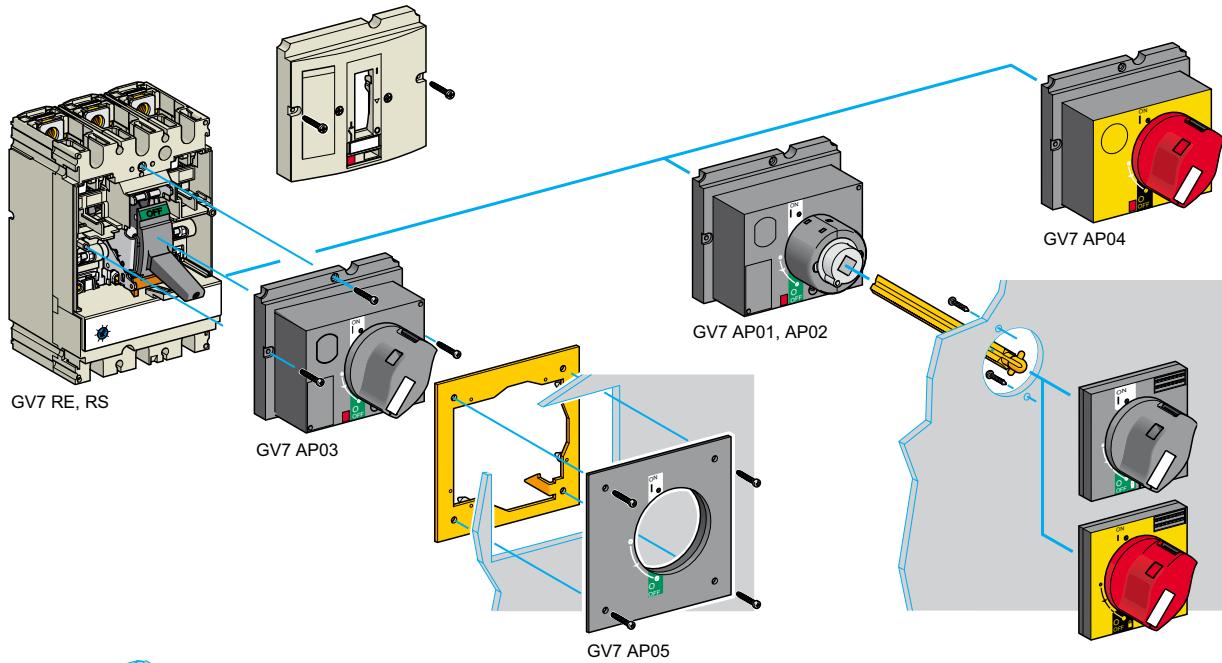

These allow the circuit-breaker to be tripped via an electrical control signal.

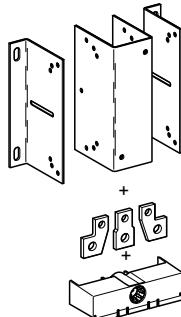

- Undervoltage trip GV7 AU
 - Trips the circuit-breaker when the control voltage drops below the tripping threshold, which is between 0.35 and 0.7 times the rated voltage.
 - Circuit-breaker closing is only possible if the voltage exceeds 0.85 times the rated voltage.
- Circuit-breaker tripping by a GV7 AU trip meets the requirements of IEC 60947-2.
- Shunt trip GV7 AS
 - Trips the circuit-breaker when the control voltage rises above 0.7 times the rated voltage.
- Operation (GV7 AU or GV7 AS)
 - When the circuit-breaker has been tripped by a GV7 AU or AS, it must be reset either locally or by remote control. (For remote control, please consult your Regional Sales Office).
 - Tripping has priority over manual closing: if a tripping instruction is present, manual action does not result in closing, even temporarily, of the contacts.
 - Durability: 50 % of the mechanical durability of the circuit-breaker.

Type	Voltage	Reference	Weight kg
Undervoltage trip	48 V, 50/60 Hz	GV7 AU055 (1)	0.105
	110...130 V, 50/60 Hz	GV7 AU107 (1)	0.110
	200...240 V, 50/60 Hz	GV7 AU207 (1)	0.110
	380...440 V, 50/60 Hz	GV7 AU387 (1)	0.105
	525 V, 50 Hz	GV7 AU525 (1)	0.100
Shunt trip	48 V, 50/60 Hz	GV7 AS055 (1)	0.105
	110...130 V, 50/60 Hz	GV7 AS107 (1)	0.110
	200...240 V, 50/60 Hz	GV7 AS207 (1)	0.110
	380...440 V, 50/60 Hz	GV7 AS387 (1)	0.105
	525 V, 50 Hz	GV7 AS525 (1)	0.100

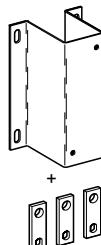

(1) For mounting of a GV7 AD or a GV7 AU or AS.

3

GV7 AC07

GV7 AC08

Cabling accessories

Description	Application	For use on contactors	Sold in lots of	Unit reference	Weight kg
Clip-on connectors for GV7 R	Up to 150 A, 1.5...95 mm ²	–	3	GV7 AC021	0.300
	Up to 220 A, 1.5...185 mm ²	–	3	GV7 AC022	0.350

Kits for combination with contactor(2)	Allowing link between the circuit-breaker and the contactor. The cover provides protection against direct finger contact	LC1 F115...F185	1	GV7 AC06	0.550
		LC1 F225 and F265	1	GV7 AC07	0.550
		LC1 D115 and D150	1	GV7 AC08	0.550

3

Direct rotary handle

Replaces the circuit-breaker front cover; secured by screws. It includes a device for locking the circuit-breaker in the O (Off) position by means of up to 3 padlocks with a shank diameter of 5 to 8 mm (padlocks not included). A conversion accessory allows the direct rotary handle to be mounted on the enclosure door. In this case, the door cannot be opened if the circuit-breaker is in the "ON" position. Circuit-breaker closing is inhibited if the enclosure door is open.

Description	Type	Degree of protection	Reference	Weight kg
Direct rotary handle	Black handle, black legend plate	IP 40	GV7 AP03	0.205
	Red handle, yellow legend plate	IP 40	GV7 AP04	0.205
Adapter plate (3)	Four mounting direct rotary handle on enclosure door	IP 43	GV7 AP05	0.100

Extended rotary handle

Allows a circuit-breaker installed in the back of an enclosure to be operated from the front of the enclosure. It comprises:

- a unit which screws onto the front cover of the circuit-breaker,
- an assembly (handle and front plate) to be fitted on the enclosure door,
- an extension shaft which must be adjusted (distance between the mounting surface and the door: 185 mm minimum, 600 mm maximum). It includes a device for locking the circuit-breaker in the O (Off) position by means of up to 3 padlocks with a shank diameter of 5 to 8 mm (padlocks not included). This prevents the enclosure door from being opened.

Description	Type	Degree of protection	Reference	Weight kg
Extended rotary handle	Black handle, black legend plate	IP 55	GV7 AP01	0.775
	Red handle, yellow legend plate	IP 55	GV7 AP02	0.775

Locking device

Allows circuit-breakers not fitted with a rotary handle to be locked in the O (Off) position by means of up to 3 padlocks with a shank diameter of 5 to 8 mm (padlocks not included).

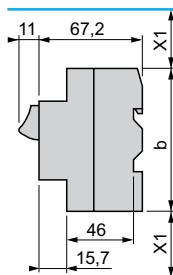

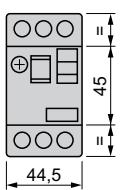

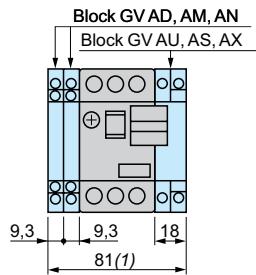

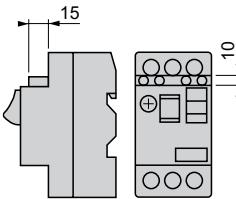

Description	Application	Reference	Weight kg
Locking device	For circuit-breaker not fitted with a rotary handle	GV7 V01	0.100

(1) Terminal shields cannot be used together with spreaders.

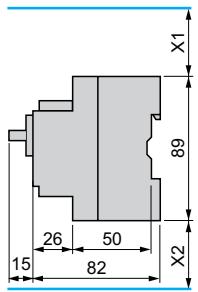

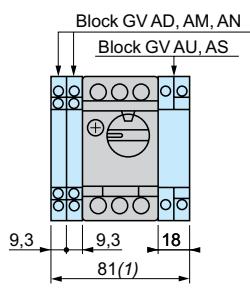

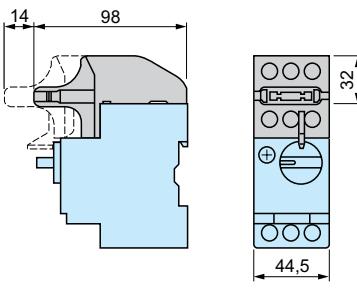

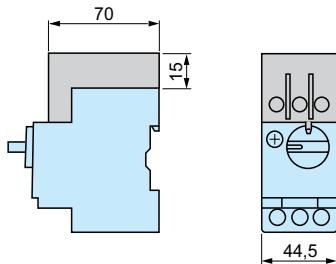

(2) The kit comprises links, a protective shield and a depth adjustable metal bracket for the breaker.

(3) This conversion accessory makes it impossible to open the door if the device is closed and prevents the device from being closed if the door is open.

TeSys protection components

Thermal-magnetic circuit-breakers TeSys GB2 for the protection of industrial equipment control circuits

3

Presentation

GB2 thermal-magnetic circuit-breakers protect and isolate the control circuits of industrial equipment with contactor coils, transformers....

They protect and isolate single-phase auxiliary circuits such as solenoid valves, electro-brakes, battery chargers, supplied from the control circuit voltage.

GB2 CB, GB2 CD, GB2 DB

12 ratings are available, from 0.5 to 20 A, in single-pole (GB2 CB), single-pole + neutral (GB2 CD) and 2-pole (GB2 DB) versions.
They have a magnetic tripping threshold set at between 12 and 16 In to withstand the current peaks generated by many industrial components.

GB2 CS

2 ratings are available, 0.5 and 1 A, in single-pole version.
The magnetic tripping threshold is set between 5 and 7 In.

Functions, installation

Clip-on fixing onto all types of 35 mm \square rails, on \square rails and on Telequick mounting plates.

Upstream and downstream marking by means of AB1 clip-in markers.

Clear indication of "I" and "O" positions on the operator.

Tamper-proof device which requires no special maintenance (fixed magnetic and thermal tripping thresholds).

Selection for the protection of circuits supplied by transformers

Single-phase transformers.

Magnetising peak: 20 In.

Operation of magnetic trips: 13 In.
